General name: Hydrophobically modified hydroxypropylmethyccellulose
INCI name: Hydroxypropylmethylcellulose Stearoxy Ether

SANGELOSE®

New thickener of a Cellulose derivative

Ideal performance of thick gelation
Possible to combine with Vitamin C derivatives
Possible to combine with Salts

Manufacturer:

DAIDO CHEMICAL CORPORATION
4-4-28, TAKESHIMA, NISHIYODOGAWA-KU, OSAKA 555-0011 JAPAN
TEL +81-6-6471-7755 FAX +81-6-6472-2152
URL http://www.daido-chem.co.jp/
【Product Name】Hydrophobically modified hydroxypropylmethylcellulose

【INCI name】HYDROXYPROPYL METHYLCELLULOSE STEAROXY ETHER

【DMF】Registered in 2009

【CAS】141615-27-2

【Type】60L, 60M, 90L, 90M

【Description】White to yellowish white powder and transparent in liquid after mixing into a solution
SANGELOSE (Hydroxypropylmethylcellulose Stearoxy Ether) is a pharmaceutical and cosmetic excipient in which C18 (stearyl group) was introduced to Hypromellose (HPMC).

There are four kinds of SANGELOSE (60L, 60M, 90L, 90M) where the molecular weight and the substitution degree of the hydrophobic group are different.

About SANGELOSE(3)

【Characteristic】(Ideal performance for a thickener)

- **Good solubility**
  
  Dissolves easily. Not dissolved in hot water.
  Mixes well leaving no fisheye effect.

- **Thicken with small quantity**
  
  Compared with HPMC, HEC etc, 1/2～1/3 quantity is enough to thicken the target.

- **Make thixotropic gel**, good shape stability and good stretch in application.

- With hydrophobic group, high skin affinity doesn’t make gel sticky.

- **Compared with normal cellulose derivatives like HPMC, HEC etc**, it has good sensory touch in use.

- Good combination with ionic composition.

- Good stability combined with various salts. The combination use with vitamin C derivatives is possible.

Safety tests SANGELOSE has passed

- Single dose oral toxicity study in rats
- Single dose dermal toxicity study in rats
- Primary dermal irritation study in rabbits
- Primary eye irritation study in rabbits
- Dermal Photosensitivity study in guinea pigs
- Dermal sensitization study in guinea pigs
- 30days dose repeated dose toxicity study in rats
- 6 month repeated dose toxicity study (30days recovery) in rats
- Reverse mutation test in bacteria (Ames test)
- Chromosomal aberration test with mammalian cells in culture
- Micronucleus test in mice
- Patch test on human skin
How to dissolve (in laboratory)
Add suitable quantity of SANGELOSE into hot water (over 70°C), mix it in about 1 min. Then, mix it in ice bath. Dissolved and thickened with bubble. (Add suitable quantity of alcohol after cooling for Sangelose M and H type)

SANGELOSE solution change by temperature (1.0 wt%)
Viscosity character (1)

Relation of Concentration and Viscosity

Compared with normal cellulose derivative, small quantity of SANGELOSE is enough to thicken.
**Influence of pH on viscosity** (1.0 wt% aq. 25°C)

SANGELOSE’s viscosity is not influenced by pH change, though it one falls rapidly in case of CARBOPOL.
Relation of Shear rate and Viscosity (1.0 wt% aq.)

Compared with HPMC, HEC, SANGELOSE make thixotropical gel.
Viscosity influence in NaCl (1.0 wt% aq. 25°C)

SANGELOSE’s viscosity is little influenced by NaCl.
Viscosity character (5)

Viscosity influence in MgSO4 (1.0 wt% aq, 25°C)

SANGELOSE’s viscosity is little influenced by MgSO4.
When added alcohol, the viscosity of SANGELOSE solution becomes thickened liquid to non-fluid gel, up to added quantity.
Influence of ethanol concentration on the viscosity of SANGELOSE 60L (1%, 25°C)
Composition for cosmetics with Vitamin C derivative (For whitening)

Because of BSE (Bovine Spongiform Encephalopathy), Placental Protein can’t be used, and Vitamin C derivative is recognized suitable instead.

For example..
- Magnesium Ascorbyl Phosphate
- Sodium Ascorbyl Phosphate
- Ascorbic Acid 2-Glucoside

Though these derivatives with Carbopol are not stable in terms of color, SANGELOSE doesn’t affect color change and viscosity decline. It can make stable cosmetics.

(Under consideration) Lotion or foundation cream with Vitamin C derivative.
Stability with 3% Sodium Ascorbyl Phosphate (0.5%aq.)

40°C, after 4 weeks

With SANGELOSE

With Carbopol
Stability with 3% Sodium Ascorbyl Phosphate (0.5% aq. 25°C)

100.0
■ Composition with TiO2 (For UV protection)

Though nano size TiO2 is used in cosmetics for UV protection, TiO2 might be aggregated by Carbopol gel. However, SANGELOSE can make stable cream without such a problem.

■ Composition with cationic material (For hair care products)

Though HEC and HPC are used in combination with cationic materials for physical stability, its sensory touch is not good. SANGELOSE can make a thixotropic gel and its long alkyl group has a good affinity with skin lipids. Thus, SANGELOSE can make stable products which feel good to the touch.
**Application for Hair care products** (Sensory test)

Test: Ten subjects, 20 to 50 years of age, applied a 1% content of various high polymer/water solutions (40g) in their hair. Leave in for 5min at room temperature. After, rinse with water and dry. Evaluate the sensory touch of hair in wet and dry conditions.

**Sensory Touch Result (Wet condition)** (Good ~ Poor =5 ~ 1)

**Adopted application**: Shampoo, Treatment, Conditioner, Hair manicure etc.
Other application examples

**Good stability with Salt**

⇒ Thickener for deep sea water cosmetics rich in minerals.

**Good stability with Acid**

⇒ Thickener for cosmetics with fruit acid.

**Good compatibility with alcohol**

⇒ Thickener for deodorants with alcohol

**Water insoluble (Sangelose M type)**

⇒ Ideal for eyeliners and eyebrow makeup having good stability against sweat and tears.

Preparation of nano-emulsion by using a microfluidizer

K. Miura, M. Fujii, S. Aiuchi, N. Koizumi, Y. Watanabe, 
Showa Pharmaceutical University, 
The Academy of Pharmaceutical Science and Technology, Japan (2010)

The nano-emulsion can be prepared by using a microfluidizer with an extremely high shearing rate. 
Recently, by using SGL as an emulsifier (alternative surfactant), ca. 500nm of nano-emulsion was prepared by a microfluidizer.

Slit diameter; 75μm

Liquid Soap

Using the main ingredient of Fatty acid soap, SANGELOSE is added to give liquid soap its thickness. Since Ampholytic surfactant and Fatty acid alkylolamide are not used in Potassium soap, there is very little smoothness. SANGELOSE gives it a refreshed feeling.

1 「No.1 ～ 4」 Combine and dissolve at 75℃（Group A）
2 [Group A] add「No.5、No.6」agitate well and mix until uniform[Group B]
3 [Group B] Once agitated, cool to 30℃
Vitamin C Beauty Lotion

Adding 1% of ETHYL ASCORBIC ACID adds a little thickness to this lotion. Using SANGELOSE here instead of a Carbomer or acrylic Resin or high polymer makes it easier to control the pH (Less than pH 5) and also gives crystal clear transparency and maintain stability.

Slightly acidic (pH 4.5 ~ 5.5)

1 「No.1 ~ 8」 Mix solution [Group A]
2 「No.9 ~ 10」 Add in sequential order, mix well until consistent
Amino Acid Facial Cleanser

With amino acid as the main ingredient in this cleanser, it gives slight viscosity. The amino acid washes the skin leaving behind a moist, clean finish. Using SANGELOSE, it is possible to add an amphoteric surfactant or a fatty acid in higher quantities.

Neutral pH (pH 6.5 ~ 7.5)
